UK Experiences with token based AAI

Tuesday, 25 August 2020 17:00 (20 minutes)

Over the last two years the UK's IRIS collaboration and IRIS 4x4 project has worked to deploy hardware and federating tools across the range of physics supported by STFC. Providing a coherent framework for accessing HTC, HPC and Open Stack cloud resources the IRIS IAM service provides federated access to resources based on the AARC blueprint architecture, removing friction for scientific communities and promising to facilitate a new generation of workflows across diverse resources.

Primary author: Mr COLLIER, Ian (STFC-RAL)

Co-author: DACK, Tom (STFC)

Presenter: Mr COLLIER, Ian (STFC-RAL)

Session Classification: Network, Security, Infrastructure & Operations Session

Track Classification: Network, Security, Infrastructure & Operations
