

Modern Monitoring Systems

Tuesday, 7 March 2017 16:30 (30 minutes)

Monitoring your infrastructure is vital to ensure your services are running for your users in an Cloud or Grid environment.

Modern Monitoring Systems can not only check the health of your hardware but also the status of provided services or issues that are relevant to security.

In this talk an overview of Modern Monitoring Systems is given and how they interact, scale and integrate with your infrastructure.
