GSDC activities for scientific computing

Tuesday, 7 March 2017 11:30 (15 minutes)

GSDC is a national funding project to promote fundamental research fields in Korea by providing computing and networking infrastructure at KISTI. Currently we support 6 global and/or domestic experiments. In this talk, we present the status of GSDC activities about experiments support, especially WLCG Tier-1 center for ALICE experiment and the underlying system architecture and its operations.
