Cyberinfrasturcture (e-Research) Usage Modalities

Monday, March 21, 2011 2:00 PM (1h 30m)

(new) Ad-hoc BOF

The TeraGrid has begun to measure "usage modalities." We want to measure these modalities to understand what objectives our users are pursuing, how they go about achieving them, and why, so that we can make changes in the TeraGrid to better support them. We believe other infrastructure projects are also working in this area, and this session will allow us to discuss how we can all do this together, including coming up with common definitions and means of measurement. If there is sufficient interest, this could lead to a working group to continue this activity.

Agenda:
(1) Discussion of TG work to-date
(2) Open discussion of other infrastructures work
(3) Discussion of how to go forward

Presenters: NAVARRO, JP; KATZ, Daniel (University of Illinois)

Session Classification: Cyberinfrasturcture (e-Research) Usage Modalities
