OGSA-DMI Session

Thursday, March 24, 2011 2:00 PM (1h 30m)

OGSA-DMI-WG) Group Discussion

The OGSA DMI Working Group tackles the problems of discovering of data transport protocols available at the data's source and destination location and agreeing on one of them, and the actual invocation of the agreed data movement. This includes direct data movements and 3rd party data movements.

This session will present an overview of the OGSA-DMI working group, summarize the past and current efforts-functional specification, renderings, and the experiences from different OGSA-DMI implementations. Furthermore, the session will also present the working group's recent effort to tackle multiple source-sink data transfer requirements. As we are working towards the next version of OGSA-DMI specification, it will be an opportunity for data management experts to share their experiences and contributions during the session.

Agenda:
(1) Functional and Rendering Specification
(2) Experiences from the OGSA-DMI WS-I Implementations
(3) Multiple source / sink transfers

Presenter: MEMON, Shahbaz

Session Classification: OGSA-DMI Session
